Standards for Suppliers	100	75	100	93	93	100	81	6
Talent Attraction & Retention	53	50	89	60	60	53	54	6

Explanations:

The scores reflect the company's performance across economic, environmental and social criteria compared to its industry average (calculated as the average score of all assessed companies eligible for the DJSI World, regional indices or country indices), the best score in the company's industry and the lowest score of the worst performing Index member in the DJSI World and DJSI regional indices in that industry. The values for the total score, the dimension and the criteria scores are on a scale from 0 to 100%. Their standard weighting in the total score is shown in the last column. If the issue is not applicable to the company (i.e. it is not exposed to this source of risks or opportunity), the criterion score displays NAP ("Not applicable"). In such cases, the weight of the criterion shown in the last column has been redistributed equally onto remaining criteria within the same dimension before calculating the dimension score. As mentioned in the email information received on Sept. 3, the Operational Eco-Efficiency scores had to be adapted for the 2010 assessment.

Since the company was assessed last year, its 2009 score provides a good proxy of its Operational Eco-Efficiency performance, hence the 2009 score was awarded in the 2010 assessment.
