Explanations:

The scores reflect the company's performance across economic, environmental and social criteria compared to its industry average (calculated as the average score of all assessed companies eligible for the DJSI World, regional indices or country indices), the best score in the company's industry and the lowest score of the worst performing Index member in the DJSI World and DJSI regional indices in that industry. The values for the total score, the dimension and the criteria scores are on a scale from 0 to 100%. Their standard weighting in the total score is shown in the last column. If the issue is not applicable to the company (i.e. it is not exposed to this source of risks or opportunity), the criterion score displays NAP ("Not applicable"). In such cases, the weight of the criterion shown in the last column has been redistributed equally onto the remaining criteria within the same dimension before calculating the dimension score.
