

Top Ideas submitted to our website

If your idea is within the list below – we ask that you not submit. We do appreciate your submissions; for some of those shown below we are already pursuing similar ideas, and with others we have decided not to pursue them. Reviewing these repeat ideas tends to slow our responses.

- Dual fuel filler doors (one on each side of the vehicle), or in a specific location on all models (such as the rear of the vehicle)
- Built in car jack assemblies for easier changing of tires, or working beneath the vehicle
- Infrastructure ideas requiring electrified roadways (will need government sponsored effort)
- Cars that do not use gasoline/diesel. Cars that use air/water to extend range (HHO, Brown's Gas, electrolysis, windmills, turbines, magnets on wheels/driveshaft, and solar)
- Exterior indicator lights to notify others that occupants are not wearing their seatbelts
- Disable cell phones and texting while driving
- Transition windshields / window screens for sun and/or element barrier
- Brake light changes to alert other drivers (intensity, flashing, location, color); these are regulated by law
- Occupant detection systems – children / pets left alone in the vehicle
