

Transportation = Freedom

Students don't always appreciate the profound effect transportation has on them or on the world around them.

How do we make transportation, and the innovation behind it, relevant to students today?

With The Henry Ford's educational resources and exhibits, learners of all types and ages gain appreciation for how our country's innate desire to find better ways to get from A to B shaped — and continues to shape — the American landscape. They see what life was like before trains, cars and airplanes were so commonplace.

Explore the newly interpreted *Driving America* exhibition in Henry Ford Museum, including its technology-based interactive kiosks, to learn how the automobile changed the way we live in America. Get inspired by the stories of aviation's early pioneers in the museum's *Heroes of the Sky* exhibit or stand in awe of the mighty power and presence of the 1941 Allegheny Steam Locomotive. In Greenfield Village, experience historic modes of transportation, including a horse-drawn omnibus, a steam-powered locomotive and the Model T.

And learning doesn't have to begin or end with a field trip. Review the Transportation in America educational programs or online teaching tools such as the Educator DigiKits for pre- and post-visit supplemental resources. Also browse collections.thehenryford.org to gain access to thousands of The Henry Ford's digitized artifacts designed to complement any in-room lesson plan. Educational programs, online teaching tools and other online resources can all get students talking about transportation, its progression and how our choices will influence future innovations.

◀ The World's Premier Automotive Exhibition, *Driving America*, focuses on the enormous influence the automobile has had on American culture — from the automotive innovations that have changed our lives to the everyday choices we make.

Transportation in America
